

Safety First!

Prevent Your Technicians from Working in Dangerous Situations

Pieter van Daal / SAP Netherlands
London / 30.09.2011

Just some figures

Safety and health at work

Every day **6,300** people die as a result of occupational accidents or work-related diseases - more than **2.3 million deaths per year**. Over **337** million accidents occur on the job annually; many of these resulting in extended absences from work. The human cost of this daily adversity is vast and the economic burden of poor occupational safety and health practices (lost working time and interruption of production, medical expenses and workers' compensation) is estimated a **4** per cent of global Gross Domestic Product each year.

The safety and health conditions at work are very different between countries, economic sectors and social groups. Deaths and injuries take a particularly heavy toll in developing countries, where a large part of the population is engaged in hazardous activities, such as agriculture, fishing and mining. Throughout the world, the poorest and least protected - often women, children and migrants - are among the most affected.

GDP UK 2009 acc. Eurostat: € 1700 Billion → **€ 62.5 Billion**

Maintenance-related: 10-15% (estimation) → **€ 6.2 – 9.4 Billion**

Objective

Explain how a safe working environment for your maintenance technicians can be influenced and how SAP will enable you to create that environment.

Agenda

- ▶ The framework to achieve a 'zero risk exposure' situation executing maintenance activities
- ▶ The SAP 'Worker Safety' concept
- ▶ The details of SAP's 'Worker Safety' solution
- ▶ Summary

The framework to achieve a 'zero risk exposure' situation executing maintenance activities

Is a 'zero risk exposure' situation executing maintenance activities a realistic goal?

Is it possible to win a leg with 9 darts?

Raymond van Barneveld at the World Championship 2009

Is it possible to score a hole in 1?

Dustin Johnson at The British Open 2011

A coherent approach to target a 'zero risk exposure' situation executing maintenance activities

Example of 'bureaucratic' Safety Management

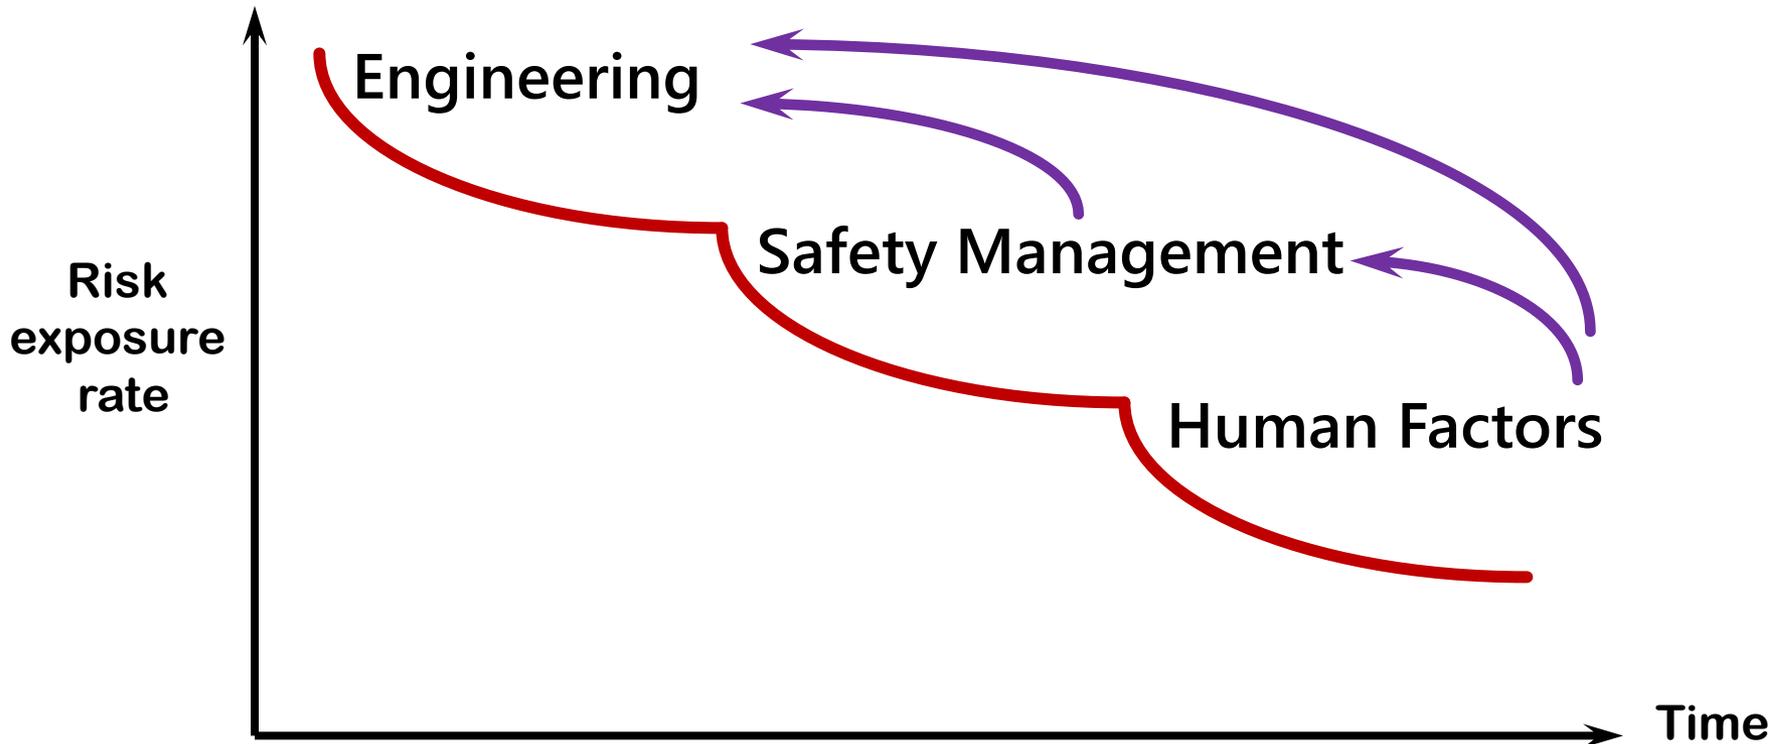

The human factor: Being aware that ‘hands-free’ is the safest way to use a cellphone in your car.....

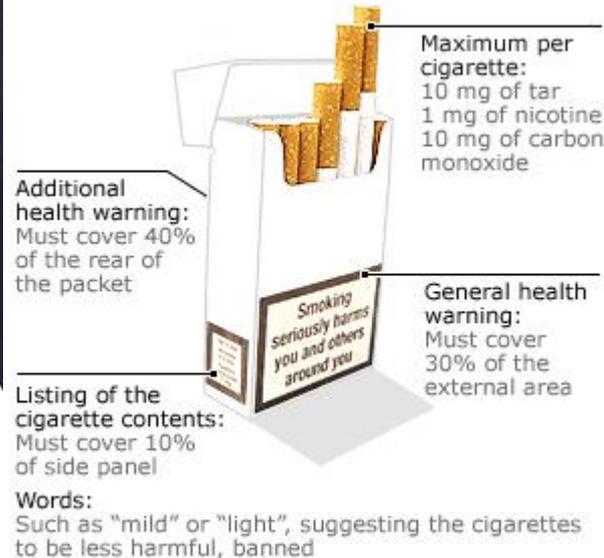

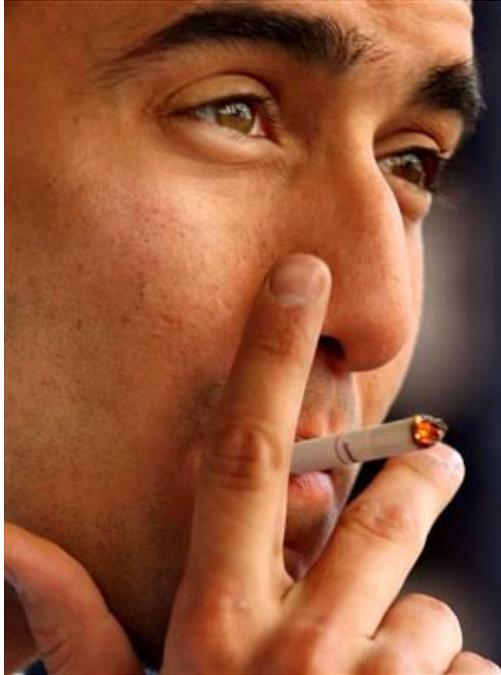

A 'zero risk exposure' situation can only be achieved by being aware that 'ensuring a safe work environment' should be considered as a process

Continuous Improvement

Workforce Involvement

Human factors are the weakest link in the Safety Improvement Process

Although we are aware that we are working in an unsafe way, we are working in...

Active participation of your workforce in the safety Improvement Process is *just* a matter of ‘culture’

With in-depth expertise in employee, contractor and process safety management, our safety consultants can transform workplace culture, develop employee skills, help reduce incidents and improve performance. We work with a wide range of companies in such industries as energy, aerospace, transportation, manufacturing, oil & gas and more.

In addition to our rich experience in high-risk processes, behavioral safety and risk management consulting, we offer an extensive library of safety training resources. Our method includes assessing and measuring workplace safety, developing an action plan, and following up as needed to sustain the results and improve safety culture.

Employee Safety Management

Providing excellence in safety management through integrated safety management systems, operational discipline, leadership development, and employee behavior.

[» Learn More](#)

Process Safety & Operations Risk Management

Helping prevent process-related injuries and incidents through integrated process safety management (PSM) systems, operational discipline and PSM performance management systems.

[» Learn More](#)

Contractor Safety Management

Minimizing contractor-related injuries and incidents through contractor safety best practices, contractor management processes, performance assessments and resource training.

[» Learn More](#)

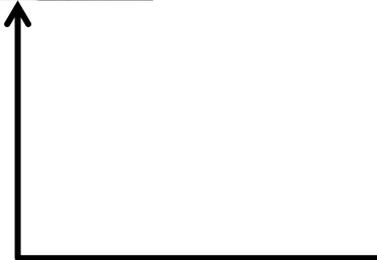

The SAP 'Worker Safety' concept

Realization of the concept by SAP

1

Risk Assessments Process executed in SAP Governance, Risk, and Compliance (SAP GRC)

SAP® Enterprise Asset Management Conference 2011

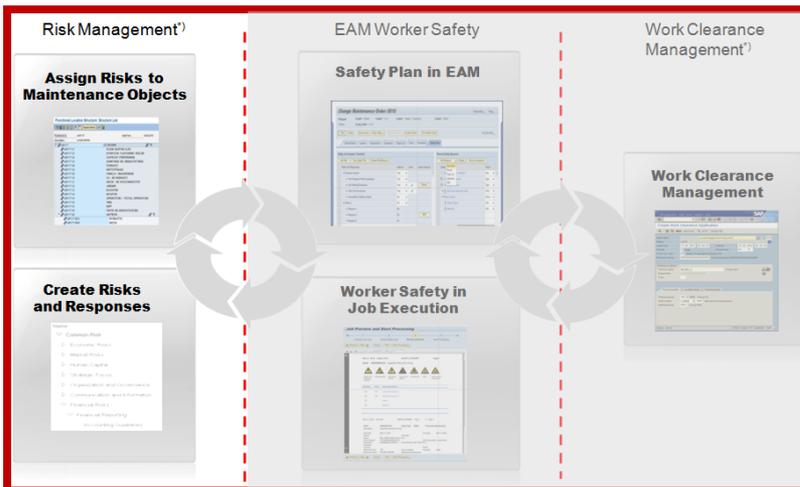

Conference Agenda, 30th September

9:10 am Safety First! Prevent Your Technicians from Working in Dangerous Situations

- The importance of a safe working environment
- SAP's worker safety concept
- Risk management, safety instructions, work permits
- Worker safety in practice

Pieter van Daal, SAP

2

Risk Assessments Process executed in SAP Environment, Health and Safety Management (SAP EHSM)

SAP® Enterprise Asset Management Conference 2011

Conference Agenda, 29th September

4:45 pm Operational Risk Management: Risk Assessment and Incident Management Using the SAP Environment, Health, and Safety Management (SAP EHS Management) Application

- Overview of SAP EHS Management as part of the operational risk management solution
- New functionality in risk assessment and incident management with SAP EHS Management
- Control failure analysis process in the EHS incident investigation
- Integration of risk management with aspects of worker safety

Wolfgang Bock, SAP

!!! ATTENTION: At the end of this presentation more details are provided how these '2 worlds' come together !!!

The details of SAP's 'Worker Safety' solution

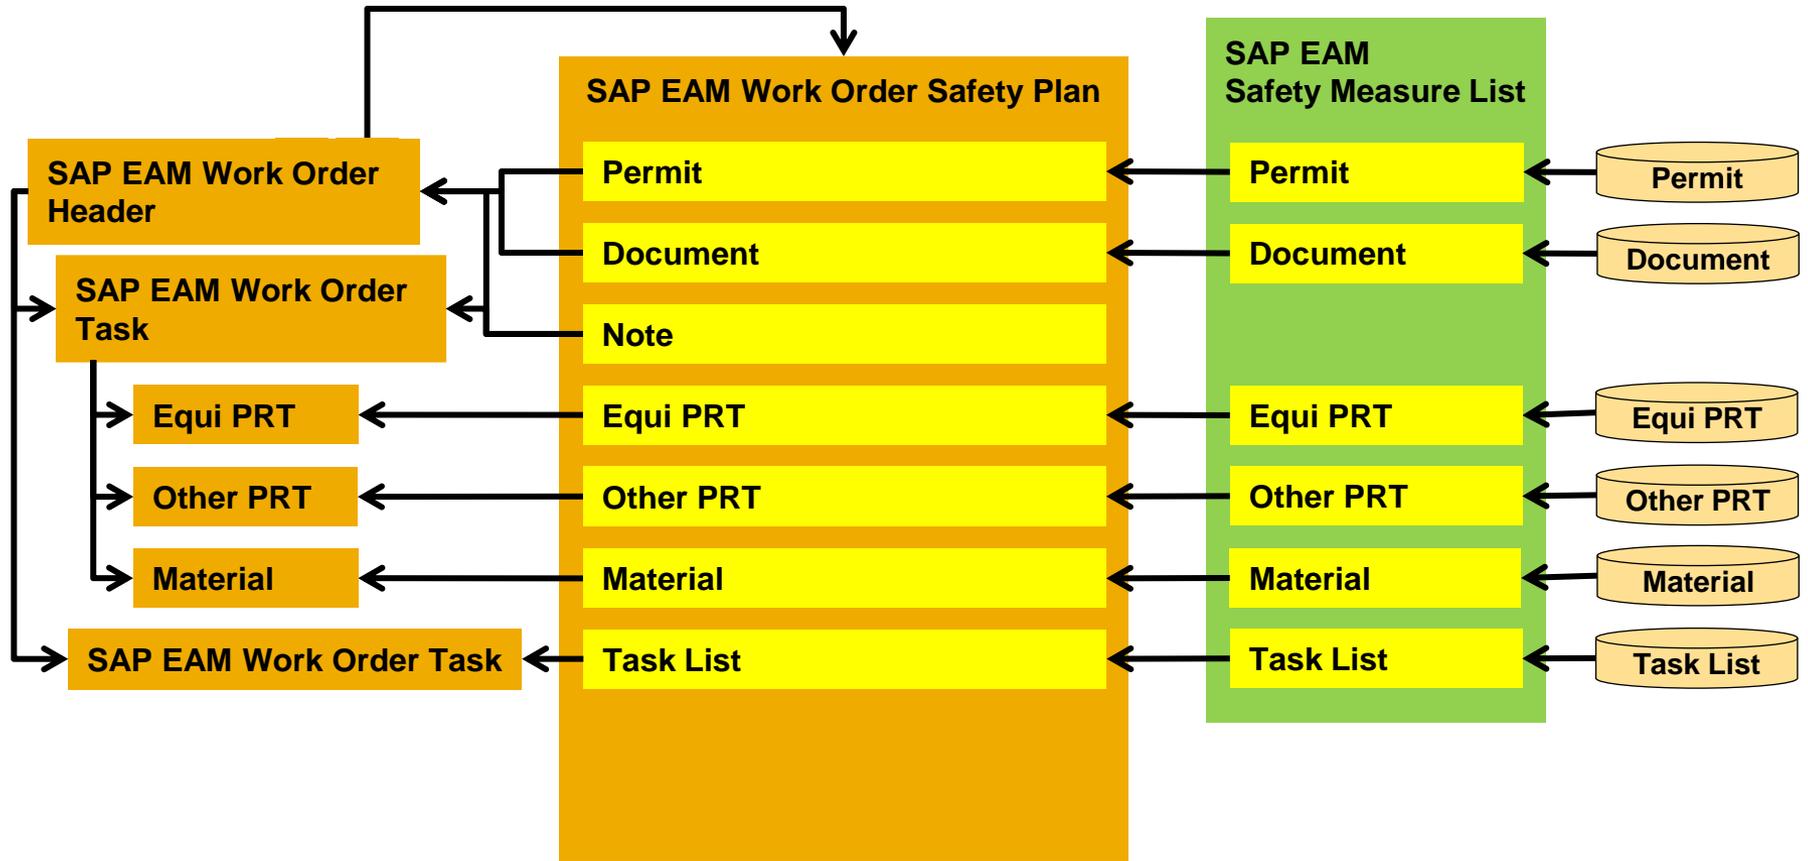

- EAM Worker Safety
- EAM Worker Safety combined with Work Clearance Management
- EAM Worker Safety combined with GRC Risk Management
- EAM Worker Safety combined with Work Clearance Management and GRC Risk Management

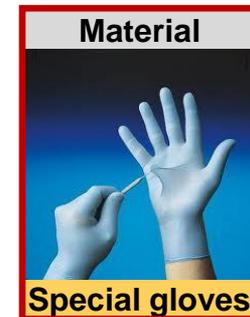

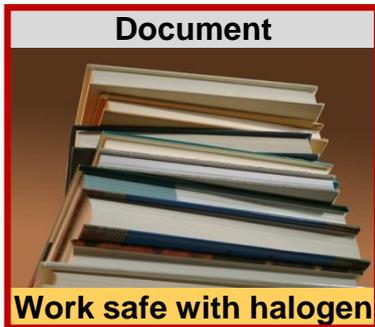

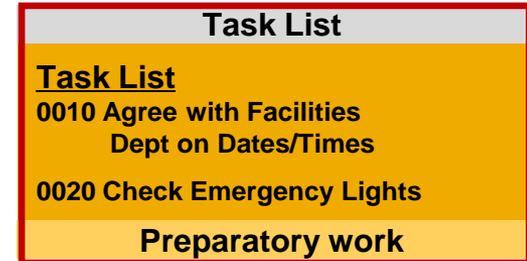

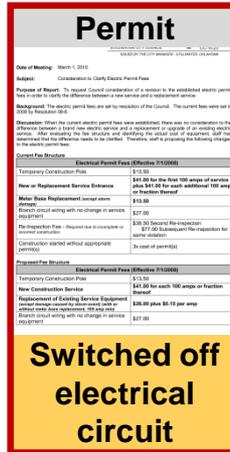

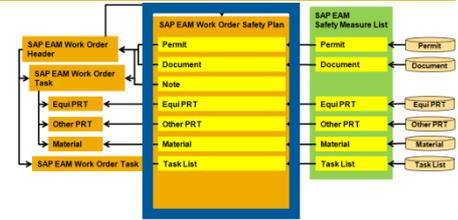

The details of SAP's 'Worker Safety' solution

SAP Multiresource Scheduling supporting the assignment of the right person to the right job (3)

The screenshot displays the SAP Resource Planning interface for the period from 10.11.2010 to 11.12.2010. The main view is a Gantt chart showing resource assignments for several resources: B.H.T. Hawke, E.F.T. Whitlam, J.Y.S. Fraser, John Howard, Kevin Rudd, and P.L.R. Keating. The chart shows assignments for various tasks across different days (Wednesday, Thursday, Friday, Monday).

A context menu is open over the Gantt chart, listing various actions such as 'Optimize Width', 'Assignment for Demand', and 'Suitable Resources'. The 'Suitable Resources' option is highlighted.

Below the Gantt chart, a table lists the tasks and their details:

Demand ID	Priority	Model	Start EndDt	Latest End	Description	Duration	Unit	Persons	Assgmts	Status

SAP Governance, Risk, and Compliance in relation to SAP Environment, Health and Safety and SAP EAM / WCM

!!! ATTENTION: Only 1 Risk Management solution can be linked to SAP EAM to propose the Work Order Safety Plan !!!

Summary

Conclusions

- ▶ The economic burden of poor occupational safety and health practices is high.
- ▶ A 'zero risk exposure' situation executing maintenance activities should be targeted by each company.
- ▶ The 'zero risk exposure' target can only be met by implementing a coherent safety management process concentrating on the ability to recognize risks, to analyze consequences, to set priorities for mitigating actions and to control and check that those mitigating actions are implemented.
- ▶ A safety management process can only be implemented successfully if in parallel a 'safety culture' is implemented: All employees should be 'infected' by the 'safety gene'!
- ▶ The 'Worker Safety' functionality SAP will deliver as part of SAP ERP 6.0 EhP 6 supports the process targeting 'zero *maintenance-related*' accidents/incidents can be met.

April 28th: Workers' Memorial Day

'Remember the dead. Fight for the living!'

May we, as SAP invite you to join us on our...
